

Q.2

The change command is used to view and change the user password expiry information. This command is used when the login is to be provided for a user for a limited amount of time or when it is necessary to change the login password from time to time. With the help of this command, we can view the ageing information of an account, the date when the password was previously changed, set the password changing time, lock an account after a certain amount of time etc.
